

Threat Management: Global Threat Intelligence Center (gTIC)

Enable Your Business with Meaningful Threat Intelligence

Cysigma's Intelligence Analysts are at the forefront of today's security landscape. By supporting our incident responders, internal partners, and customers, the Cysigma Global Threat Intelligence Center (gTIC) has a bird's eye view of the threat landscape. Cysigma's team of Intelligence Analysts sort through the overwhelming noise within the threat intelligence community to find your business the most meaningful and actionable insights to harden your security posture. We focus on not only threat intelligence, but risk intelligence, to keep your environment ahead of past, present and emerging threats.

What makes for good threat intelligence? At Cysigma, we believe good intelligence is detailed, timely, accurate, and complete. Anything else is threat data (it's useful, but it won't provide actionable results). Cysigma's gTIC focuses on risk intelligence over raw threat data. What does a threat actually mean to your organization? Where should you focus your security spending? What do you need to be successful in defending your environment?

Cysigma Solutions

Threat Feeds

Cysigma's gTIC is a repository for threat intelligence, continually identifying internal, external and community intelligence sources. Once identified, Cysigma evaluates and catalogs the source for application and use. Additionally, Cysigma reviews new intelligence sources daily maintaining up-to-date and highly relevant sources.

ThreatBEAT

ThreatBEAT emails are daily and weekly summaries of top industry news related to security. These are tactical intelligence products, designed to enable frontline defenders to better prepare themselves against threat actors and their machinations.

Dark Web Searches

Bad guys hide in the dark corners of the internet. With our Dark Web Search offering, you will find what's lurking in the shadows of the web.. Based on a list of assets provided to the team, Cysigma's intelligence analysts will identify and interpret any relevant information related to those assets and provide a detailed report with context and reporting.

Vertical Risk Reports

Cysigma's Vertical Risk Reports cover 21 industry verticals. These reports are strategic-level documents which cover overall cyber threats, risks, and adversaries relevant to each vertical and support situational awareness of relevant industry-specific threats.

Cyber Threat Landscape Report

The Cyber Threat Landscape Report takes our Vertical Risk Report to the next level by customizing it to your environment. Through interviews and questionnaires, Cysigma provides top attack vectors, threats, trends, and adversaries, including MITRE ATT&CK mappings.

CTI Program Builds and Assessments

Do you have a current intelligence program? Would you like to improve it? Cysigma will assess your current intelligence program bottom to top and provide guidance for charters, PIRs, inputs, outputs, stakeholder identification and more.

The Cysigma Advantage
